

SmartImgKit TXT to PDF Test Document

=====

This is a plain text file used to verify the TXT to PDF converter.

Long lines should wrap automatically to fit the page width without being cut off. The converter uses jsPDF to render real text that can be selected, copied, and searched in the resulting PDF document.

Paragraph two follows an empty line above it. Empty lines act as paragraph breaks in the output PDF.

Paragraph three. The tool supports configurable font size, page size (A4 or Letter), and font family (Helvetica, Courier, or Times).

Line four with some extra spaces that should be preserved.

Line five immediately after line four (no blank line between).

END OF TEST FILE.
